Neuron circuit types, parent-warm (seed 0, 72 cells) — activation threshold |a| ≥ 0.0001
block 1: ρ(1+1 → 2)
block 1: ρ(1+1+1+1 → 4)
2 + 2 → 4 cannot occur in block 1: its pre-activation z₁ = V₁E x is linear in x.
Columns of 0 at large λ₀: suppressed phase (the network collapsed).
phase boundary of this grid: H_D above, H_C below
fraction of block-1 neurons
block 2: ρ(1+1 → 2)
block 2: ρ(1+1+1+1 → 4)
block 2: ρ(2+2 → 4)
fraction of block-2 neurons
block-1 decay ratio λ₁/λ₂
common decay scale λ₀
